

## How Insect's use Camouflage

- **Insects using Camouflage.**

Insects are fascinating creatures that serve a very important purpose by providing food for birds, mammals and other wildlife. Learn the different strategies that bugs use to keep from being eaten!

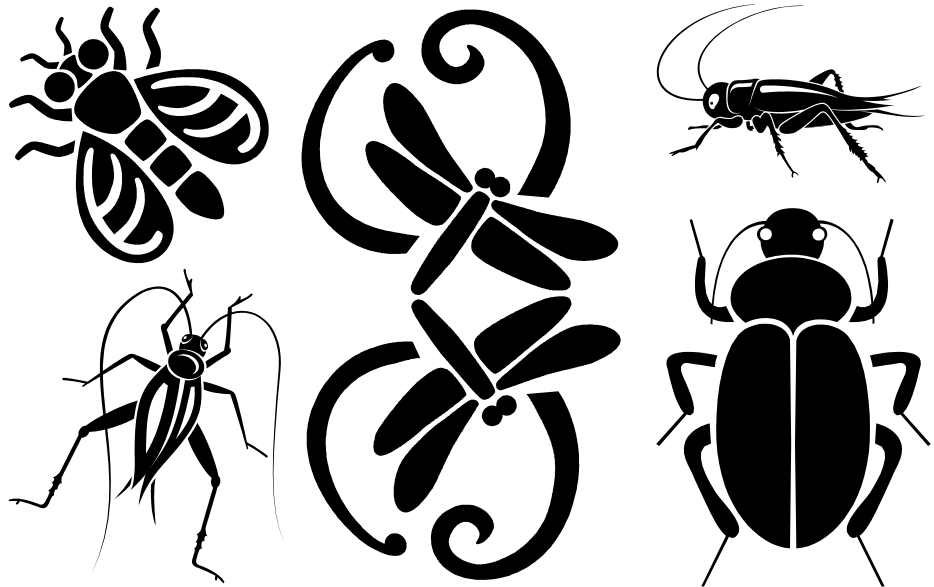

- **Bug Hunt** . Go for a hike with Professor Critter to catch some insects and observe them up close. We will let the bugs go in a special release ceremony.

Some insects blend in so perfectly with their environment that predators simply overlook them. Others do not blend in because they don't have too. Brightly colored insects may be an indication that they are poisonous or a predator. Even as a predator, blending in helps when hunting prey – just think of a giant praying mantis hidden in the grass, on a tree or in your garden. These bugs blend in so they can eat other bugs!

Respect Earth's Resources provides a fun, educational experience for your group.

Programs typically include an interactive game or craft and will be specifically designed to meet the needs of your group. For more information, visit our website [www.respectearthsresources.com](http://www.respectearthsresources.com) or
